

AI Resume Analysis Report

ATS Score: 85%

Detected Skills:

- Python
- Java
- SQL
- HTML
- CSS
- AI

Missing Skills:

- Machine Learning

Based on the provided resume and job description (which is not actually provided), I will analyze the resume and give general feedback. Please note that the job description is not available, so I will provide general suggestions.

****Assuming a typical AI/Data Science job description:****

1. ****ATS Score****: 7/10 (The resume is well-structured, but it's a bit basic and lacks specific details about projects and experiences. An ATS (Applicant Tracking System) score is an estimate of how well a resume will pass through an automated screening process.)

2. ****Matching Skills****:

* Programming languages: Python, Java

* Technical skills: ML Basics, NumPy, Pandas, ScikitLearn, Data Virtualization

* Development tools: Git & GitHub, VS Code, StreamLit

- * Database: SQL

- * Projects: AI Resume Analyzer, AI Chatbot (relevant to AI/Data Science)

3. **Missing Skills**:

- * Specific AI/ML frameworks (e.g., TensorFlow, Keras)

- * Deep learning experience

- * Natural Language Processing (NLP) experience beyond basics

- * Cloud platforms (e.g., AWS, Azure, Google Cloud)

- * Big data processing (e.g., Hadoop, Spark)

- * Data visualization tools (e.g., Tableau, Power BI)

4. **Suggestions**:

- * Add more specific details about projects, such as the technologies used, challenges faced, and accomplishments.

- * Emphasize achievements and impact in the projects and internship sections.

- * Consider adding relevant coursework, academic projects, or research experience.

- * Highlight soft skills, such as teamwork, communication, and problem-solving.

- * Tailor the objective statement to the specific job description (once available).

- * Use action verbs (e.g., "Developed," "Improved," "Enhanced") to describe experiences and skills.

- * Quantify achievements wherever possible (e.g., "Solved 100+ problems on LeetCode" instead of just "LeetCode").
